CORE SKILLS

SharePoint Framework (SPFx) · React.js · TypeScript · JavaScript ES6+ · Fluent UI v8/v9 · PnP JS · Redux · Griffel.js · Material UI

MICROSOFT 365

Microsoft Graph API · SharePoint REST API · CAML queries · PnP PowerShell · Azure AD / Entra ID · Graph Explorer

BUILD & DEVOPS

Azure DevOps · Azure DevOps Boards (WIQL) · Git · GitHub · webpack 4 · Babel · npm · gulp · spfx-fast-serve · Yeoman

TOOLS

VS Code · Cursor IDE · Cursor CLI · Claude Code · Postman · Figma / PSD-to-HTML

Prithiv Raj G

SOFTWARE DEVELOPER | REACT JS DEVELOPER | AI AGENTIC DEVELOPER

PROFILE

Software Developer with **4.5+ years** building enterprise SharePoint Framework solutions and full-stack web applications. Core developer on the **Policy Management** compliance SaaS platform at Ideagen (formerly ConvergePoint), used by global enterprises and deployed into customer-owned SharePoint tenants. Proficient in React.js, TypeScript, Fluent UI, Microsoft Graph and Azure DevOps. Owns features end-to-end, from development through testing, with hands-on expertise in AI agentic development using Claude Code and Cursor CLI.

4.5+	20+	34	5
years experience	reusable components	components secured	modules delivered

EXPERIENCE

Software Developer

Apr 2022 - Present

Ideagen (formerly ConvergePoint India Pvt. Ltd.)

PolicyManagementSPFx - SharePoint Framework React application

Feature delivery & ownership

- Own and deliver sprint features across the **Policy Creation, Library, Certification and Administration** modules of a large-scale compliance SaaS platform.
- **End-to-end ownership:** take full ownership of assigned work, from initial development through end-to-end testing and delivery.
- Delivered Admin Document Permission Setup, Multiple Policy Configuration Management and Policy Document Settings alongside the core modules.
- Diagnosed and fixed a validation bypass where Fluent UI Switch used uncontrolled *defaultChecked* instead of controlled *checked*, which caused inconsistent adhoc workflow state.

Reusable component library

- Built and manage **20+ reusable React components**, published as shared npm packages and consumed across multiple projects, including:

Admin Layout · Custom Panel · Activity History · Certification · Multi-File Upload · By Topic View · Document View Library · Global Settings · App Design Settings · Document Status

Security & dependency management

- Led **Veracode remediation**: upgraded axios, jquery, moment and scoped @convergepoint packages, and managed transitive dependencies for jsPDF and DOMPurify across **34 shared components**.
- Built a client-side upload security layer using JSZip that inspects .docx internals for embedded executables and blocks dangerous extensions before server submission.
- Protected secrets stored in SharePoint property bags with CryptoJS AES encryption.

Build, performance & tooling

- Resolved critical **webpack 4** build blockers, including ESM-only tabster v5+ and jspdf v4.x, through package overrides, Babel loader configuration and dependency pinning.
- Improved SPFx build performance by disabling source maps, enabling writeToDisk and configuring splitChunks; recommended splitting oversized components (247 KB+ TSX).
- Maintained feature, staging and release branch hygiene in the CPDevOps Azure DevOps organization; fixed restricted fetch refspec issues in multi-branch repositories.

Software Developer | React JS | AI Agentic

SECURITY & QUALITY

Veracode remediation

JSZip file validation

OWASP Top 10

Dependency auditing

CryptoJS AES

BACKEND & WEB

Node.js

Express.js

REST APIs

MySQL

HTML5

CSS3

Sass

Bootstrap 4/5

jQuery

Responsive design

Identity, access & Microsoft 365

- Implemented **People Picker AD group validation** with Microsoft Graph (GroupMember.Read.All, User.Read.All), covering direct and nested membership and closing a long-standing authorization gap.
- Managed Azure AD / Entra security groups and SharePoint group provisioning with PnP PowerShell; investigated group sync delays and resolved claim format for Object ID-based membership.

Collaboration

- Work with QA, Product Owners and stakeholders to communicate blockers, status updates and release readiness through clear written channels.

Architecture & development environment

- Work within a three-API-layer architecture on SPFx scaffolded with Yeoman, under a Node 18 constraint; use spfx-fast-serve for fast local iteration.
- Ship through an Azure DevOps and CDN pipeline into customer-owned SharePoint tenants, using the shared @convergepoint/ui-components library across projects.
- Use Cursor IDE with .mdc / .cursorrules context files to keep SPFx conventions consistent during development.

AI agentic development

- Hands-on expertise in **AI agentic development** with **Claude Code** and **Cursor CLI**.

SELECTED FEATURE WORK

Bulk Workflow

- Built the frontend: multi-document grid, permission-aware action bar, confirmation modals, progress banner and toast, and a per-document status dialog, integrated with backend APIs.
- Designed pre-execution validation (file conflict, e-signature, malicious content scan) and made the backend versus frontend validation architecture decision.
- Analysed validation throttling (about 150 API calls per document; 50 documents took 5-6 minutes) and worked through SharePoint file lock errors and validateUpdateListItem limitations.

License Manager (user-based licensing)

- Working on AD group license logic and superseding-permission behaviour; investigating and documenting a defect where AD group licenses double-count members who already hold individual licenses.

Frontend logging for SPFx

- Evaluated Application Insights against alternatives and produced a backlog description, implementation guide and comparison document. Recommended centralized Application Insights because logs inside customer tenants are not accessible to Ideagen.

KEY PROJECT

Policy Management Platform

Enterprise compliance SaaS on SPFx for policy creation, libraries, certification and attestation at scale. Modules: Policy Creation & Library, Policy Certification, Admin Document Permission Setup, Multiple Policy Configuration Management, Policy Document Settings.

STRENGTHS

- End-to-end ownership
- Dependency triage
- Build debugging
- Security remediation
- Clear written communication
- AI agentic development
- Agile / sprint delivery

PROBLEM-SOLVING HIGHLIGHTS

Unblocking webpack 4 builds

BUILD ENGINEERING

Challenge ESM-only packages (tabster v5+, jspdf v4.x) could not be built by the project's webpack 4 toolchain.

Action Applied targeted package overrides, Babel loader configuration and dependency pinning.

Result Critical build blockers resolved.

Veracode security remediation

SECURITY

Challenge Vulnerable dependencies across the application and its shared component packages.

Action Upgraded axios, jquery, moment and scoped @convergepoint packages; managed transitive jsPDF and DOMPurify dependencies.

Result Remediation delivered across 34 shared components.

Safer document uploads

SECURITY

Challenge Uploaded Word files could carry embedded executables.

Action Built a JSZip layer that inspects .docx ZIP internals and checks for dangerous extensions.

Result Dangerous files blocked client-side before server submission.

People Picker AD group validation

IDENTITY & ACCESS

Challenge Long-standing authorization gaps when validating AD group membership.

Action Implemented direct and nested membership checks with Microsoft Graph (GroupMember.Read.All, User.Read.All).

Result Long-standing authorization gaps resolved.

TECHNICAL EXPERTISE

Frontend	React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass, Bootstrap 4/5, Fluent UI v8/v9, Griffel.js, Material UI, Redux, jQuery, responsive design
SharePoint / M365	SharePoint Framework (SPFx), PnP JS, PnP PowerShell, SharePoint REST API, CAML queries, Microsoft Graph API, Azure AD / Entra ID
Backend / runtime	Node.js, Express.js, REST APIs, MySQL
Build & DevOps	webpack 4, Babel, npm, gulp, spfx-fast-serve, Yeoman, Git, GitHub, Azure DevOps (CPDevOps), CDN pipelines
Security & QA	Veracode remediation, JSZip file validation, CryptoJS AES encryption, OWASP Top 10 awareness, dependency auditing
AI-assisted dev	Agentic development with Claude Code and Cursor CLI; Cursor IDE project rules (.mdc / .cursorrules)
Tools	Visual Studio Code, Cursor IDE, Azure DevOps Boards (WIQL), Graph Explorer, Postman, Figma / PSD-to-HTML
